

STEAM CHALLENGE

Soil Art

1

Introduction

Soils are all around us. They come from different places, and no two soils are alike. And although they are a little dirty, they are fun to play with. And what better way to play with soil than by creating art?

2

Materials

- Powdered Soils
- Paintbrush
- Water
- Construction or cardboard paper

3

Instructions

Collect different soil samples. If the samples are in big pieces, grind them with a rock to get them as close to powder texture as possible. Use the soils as watercolor paint.

Let your imagination and creativity flow. Add a little water to the soil and paint on your paper.

4

Let's Discuss

What makes the soil have different colors? Why do some soils have more pigments than others?

5
